Subject: adopt the proposed energy code updates

External Email

Hello:

I urge you to adopt the proposed energy code updates – I would be proud to belong to the state with the strongest energy codes. Methane is way to strong a GHG for us to use it in homes at all. Gas creates fracking and is not even healthy to have in people's homes.. We need new homes to be built without fossil fuels if we are to have any hope of meeting our climate goals both in our state and in our counties. This is an equity issue because if we don't build them right then as people with money switch off of gas – and the price of gas goes up – older homes will have more expensive gas heating and cooking equipment in them. Let's skip that future.

I know it may feel like sticking your neck out to make this vote but You have a chance to make a real difference for climate change that many of us don't.
Please vote for our kids future!

Thanks,
Lynn Fitz-Hugh
